

Streamline Credential Management and Collaborate Securely with Active Directory Federation Services (ADFS)

Active Directory Federation Services (ADFS) makes it possible for local users and federated users to use claims-based single sign-on (SSO) to Web sites and services. You can use ADFS to enable your organization to collaborate securely across Active Directory domains with other external organizations by using identity federation. This reduces the need for duplicate accounts, management of multiple logons, and other credential management issues that can occur when you establish cross-organizational trusts.

BENEFITS OF USING ADFS:

Single Sign-on. Federated Identity sign-in model facilitates true single sign-on (SSO), allowing users to have the same password for on-premises and cloud applications including Office 365, third-party cloud, and SaaS applications.

Reduce Security Risks. With Federated Identity, you can keep the authentication process within your on-premises Active Directory, enabling increased security. You don't have to synchronize password hashes in the cloud Azure Active Directory. Password policy is stored on-premises, behind your firewall.

Unified Management Experience. The Federated Identity also helps in managing Office 365 and other cloud applications seamlessly by providing a unified experience. Client Access Policy can limit access to cloud services based on user location, client type, or Exchange endpoint of the client. Federated Identity also provides sign-in audit, and immediate user disable feature.

Utilize Existing AD Infrastructure. If you already have an Active Directory infrastructure in place, it is a no-brainer to deploy Federated Identity.

Forsyte's Quick-Start ADFS Offer: Price - \$5,000

Forsyte team of Azure engineers will work with your organization to configure and deploy the following quick-start ADFS environment:

- 2 ADFS Servers
- 2 WEP Servers
- 1 AD Server
- VPN Configuration

Assumptions:

- Includes professional services only.
- Does not include an Azure Subscription.
- Assumes you have an Azure Subscription in place that will support the required configuration.

Forsyte IT Solutions is a leading provider of Microsoft Cloud technology. Forsyte's team of senior level MCSEs and MCSDs have tackled hundreds of complex and challenging IT projects. At our core, Forsyte is a cloud-first solutions provider that enables clients to optimize their investments in Microsoft technology. As a Microsoft Gold Certified Partner, Forsyte provides expert, high quality, data management and governance solutions to medium and large organizations across multiple industries, including education, state and local government, and the commercial sector.
