

# Protect your Organization from Disaster with Data Protection Manager (DPM)

System Center Data Protection Manager (DPM) is a robust enterprise backup and recovery system that contributes to your Business Continuity and Disaster Recovery (BCDR) strategy by facilitating the backup and recovery of enterprise data. DPM can be deployed to preform application-aware backups, file backups, system backups, and Hyper-V backups, and can store backup data to disk for short-term storage, Azure for both short-term and long-term storage off-premises, and tape for long-term storage.

## BENEFITS OF USING DPM:

**Continuous Data Protection.** DPM protects core Windows Server workloads by continuously monitoring data for changes at a block or byte-level (depending on workload), using technology and later replicating those changes capturing data changes with application-aware byte-level agents, providing an easy-to-manage and robust disk/tape back end platform, and one-click lossless application recovery.

**Rapid and Reliable Recovery.** DPM enables IT administrators & end-users to easily recover data in minutes from easily accessible disk instead of locating and restoring from less-reliable tapes.

**Advanced Technology for Enterprises of all sizes.** DPM brings together the best aspects of CDP real-time protection with traditional tape backup/restore to provide a comprehensive disk to disk to tape data recovery solution.

**Maximizing protection of workloads.** DPM agents use Volume Shadowcopy Services (VSS) to ensure that data is protected and restored using only methods that were designed by and supported from the application workloads themselves. The DPM management console is designed for the application stakeholder and uses wizards and workflows to simplify the backup and restore process.

## Forsyte's Quick-Start DPM Offer: Price - \$5,000

Forsyte team of Azure engineers will work with your organization to configure and deploy the following quick-start DPM solution:

- Five (5) Server Backups utilizing System Center DPM 2016

### Assumptions:

- Includes professional services only.
- Does not include an Azure Subscription.
- Assumes you have an Azure Subscription in place that will support the required configuration.

Forsyte IT Solutions is a leading provider of Microsoft Cloud technology. Forsyte's team of senior level MCSEs and MCSDs have tackled hundreds of complex and challenging IT projects. At our core, Forsyte is a cloud-first solutions provider that enables clients to optimize their investments in Microsoft technology. As a Microsoft Gold Certified Partner, Forsyte provides expert, high quality, data management and governance solutions to medium and large organizations across multiple industries, including education, state and local government, and the commercial sector.
