Helping Organizations Make IT simpler with a Modern Desktop

IT is complex. And that means it can be difficult to keep up with the day-to-day demands of your organization, let alone deliver technological innovation that drives the business forward. In desktop management, this is especially true: the process of creating standard images, deploying devices, testing updates, and providing end user support hasn't changed much in years. Forsyte is determined to change that paradigm with our vision for a modern desktop powered by Windows 10 and Office 365 ProPlus. A modern desktop not only offers end users the most productive, most secure computing experience—it also saves IT time and money, so you can focus on driving business results.

What is a "Modern Desktop?"

Always Up To Date. A modern desktop is powered by Windows 10 and Office 365 ProPlus and is always up to date with insights and security powered by the cloud. After years of refinements, we believe this is the most productive and secure computing experience for businesses. Not only does it provide the richest user experience, it also helps IT better manage devices and data, with lower costs.

Integrated Device Management. Configuration Manager is integrated with Microsoft Intune, allowing organizations to choose between multiple deployment and management options of Windows 10. A simplified interface allows for less time learning to manage and more time managing.

Streamline Device Preparation. Windows AutoPilot & Intune are key parts of the flexible device preparation approach needed in a modern workplace. It's as simple as taking a new device from the box, powering it on, entering your credentials, and sitting back while it is configured and managed from the cloud with minimal user or IT effort, with no management of images.

Compliance That's Built In. The complexity and difficulty of managing compliance can be overwhelming, especially for larger organizations. We updated Microsoft 365 to include built-in and continuously updated capabilities that help with regulations that govern archiving, retention, disposition, classification, and discovery of data. These new features will really help reduce the complexity of executing compliance workflows.

Microsoft Solutions that Power the Modern Desktop :

- Windows 10
- Windows AutoPilot
- Intune
- Configuration Manager
- M365 Security & Compliance Center
- Windows Analytics
- M365 Admin Center
- System Center Configuration Manager
- Desktop App Assure
